		Page 2/16	

I. INTRODUCTION

Family Medicine is an academic and scientific discipline that has its own educational content, research, evidence-based medicine, and clinical activity, as well as a clinical focus on primary care. Family Medicine is a specialty that provides comprehensive and bio-psycho-social healthcare for patients of all ages and both sexes. The individual is approached both under health and sickness conditions, and it covers the needs in matters of health of the individual, family and community.

The university course in the specialty of Family Medicine was introduced in the university curriculum in January 2008 and is based on the principles of professional training in General Practice / Family Medicine under the EURACT Education Agenda.

The content of the course is structured to foster the students' knowledge of the specialty, and it will contribute to their familiarization with the goals, objectives, principles and content of family physician's practice, as well as with the role of family medicine in the modern health system, with the particularities of the working team activity in the family doctor's office, with the package of services rendered, with the notion of health, with the organization of the patient and family centered consultation, the effective communication skills, the particularities of the diagnosis and treatment, the health care of the collectivities, the preventive aspects, and the medical acts that regulate the activity of the family doctor.

- Mission of the curriculum (aim) in professional training

One of the main objectives of the course is to create the concept of Family Medicine as a specialty and to familiarize the students with the peculiarities of a family doctor's activity. Another objective is to develop the skills of exercising the roles specific to team work at the level of Primary Health Care, to promote the spirit of initiative, cooperation, positive attitude and respect for patients and colleagues. The third objective is to understand the role of the family doctor in maintaining health and addressing health problems both at individual and at community level.

Knowing the organization and functioning of a family physician ensures the student-doctor's chance to understand the need for the primary health care in the system, the efficient ways of interdisciplinary collaboration and the theoretical training required for practicing the practical family internship in the VI-the year of study.

- Language of the discipline: English, Romanian, Russian, French.
- Beneficiaries: students of the VI-year, faculty Medicine No.1 and No. 2.

II. MANAGEMENT OF THE DISCIPLINE

Code of discipline	S.12.O.102
Name of the discipline	Family Medicine
Person in charge of the discipline	MD, PhD, university professor Gh. Curocichin

	CD 8.5.1 DISCIPLINE SYLLABUS FOR UNIVERSITY STUDIES	Edition:	10
		Date:	10.04.2024
		Page 3/16	

Year	VI	Semester/Semesters	XII
Total number of hours, including:			150
Lectures	16	Practical/laboratory hours	16
Seminars	16	Self-training	72
Clinical internship	30		
Form of assessment	E	Number of credits	5

III. TRAINING AIMS WITHIN THE DISCIPLINE

At the end of the discipline study the student will be able to:

- **at the level of knowledge and understanding:**
 - To define the role and professional competencies of the family doctor in the light of the requirements of international organizations - WHO, WONCA EUROPE, EURACT;
 - To know the management of the primary medical practice and to organize the work of the family doctor's team in the office and at home under the compulsory medical insurance;
 - To name the family doctor's activities and the role of the family in overcoming disease-related problems;
 - To know the stages of the patient-centred consulting and communication skills required for the achievement;
 - To know the principles of assertive communication;
 - To know the patient's rights and the ways to respect them in the family doctor's practice;
 - To list the principles and abilities needed to solve specific health problems in family medicine;
 - To know the concepts of comprehensive and holistic approach to patients;
 - To understand diagnostic and therapeutic synthesis in family doctor practice;
 - To know the primary, secondary and tertiary prevention activities in the primary care team.
- **at the application level:**
 - To distinguish the basic principles of medical bioethics in the practice of the family doctor
 - To organize medical consultation based on the principles of the patient-centred approach;
 - To demonstrate communication skills with the patient in order to improve the quality of collecting medical information and establishing an effective doctor-patient relationship;
 - To apply a holistic approach to patient care;
 - To provide advice to healthy people;
 - To perform diagnostic and therapeutic synthesis in particular clinical situations;

CD 8.5.1 DISCIPLINE SYLLABUS FOR UNIVERSITY STUDIES

Edition: 10

Date: 10.04.2024

Page 4/16

- To choose family-centric services according to the needs and family life cycle.
- **at the integration level:**
 - To be competent to adopt a patient-centred attitude;
 - To be able to approach patients comprehensively and individually in the context of respect for fundamental human rights;
 - To be competent in identifying the role of family medicine as a specialty in the health system of the Republic of Moldova.

IV. PROVISIONAL TERMS AND CONDITIONS

Student of the VIth requires the following:

- Knowing the teaching language
- Confirmed competences in fundamental sciences and clinical disciplines
- Digital competences (use of the Internet, document processing, electronic tables and presentations, use of graphic programs)
- Ability to communicate and team work;
- Qualities - tolerance, initiative, autonomy and empathy.

V. THEMES AND ESTIMATE ALLOCATION OF HOURS

Lectures, practical hours/ laboratory hours/seminars and self-training

No. d/o	THEME	Number of hours				
		Lectures	Seminars	Practical work	Self-training	Clinical internship
1.	Family medicine as a specialty.	2			6	6
2.	Management of medical practice. Family physician activity under compulsory medical insurance.	2		3	10	
3.	Healthy person in the practice of the family doctor. Diagnosis of the health.	2	3	3	10	4
3.1	Promoting health and preventing disease.	2				
4.	Patient-centred consulting. Communication - an important tool in the work of the family doctor	2	3	2	10	6
5.	Particularities of diagnosis in family medicine. Diagnostic synthesis.	2	3	2	8	8
6.	Particularities of treatment in family medicine. Therapeutic synthesis.		3	2	10	
7.	The holistic approach of the patient's problem: integration and hierarchy of health problems. Patient's	2	2	2	10	4

		Lectures	Seminars	Practical work	Self-training	Clinical internship
	conduct in the case of complex health problems. Comprehensive approach.					
8.	The patient in the family context. Family and illness. Family-centered care.	2	2	2	8	2
Total		16	16	16	72	30
			32			

VI. PRACTICAL TOOLS PURCHASED AT THE END OF THE COURSE

Mandatory essential practical tools are:

- Organizing the patient-centered consultation;
- Compiling the plan of patient examinations according to national and standardized clinical protocols for family physicians.
- Full examination of the patient with multiple problems.
- Formulation of the clinical case based on the bio-psycho-social model;
- Demonstrating effective communication skills with patients.
- Informing the patient and obtaining informed consent during the medical consultation;
- Performing focused clinical examination.
- Arguing for a positive and differentiated diagnosis;
- Determining the health needs of an individual and the community.
- Proposing a plan of preventive measures in the case of a specific patient;
- Carrying out the consultation for health education;
- Exercising the elements of behavior modification intervention;
- Carrying out the individualized diagnostic synthesis;
- Hierarchy of diseases of a patient with multiple problems;
- Carrying out the therapeutic synthesis in a concrete case.
- Prescribing prescriptions (Form No. 1 approved by MH RM N.960 of 01.10.2012);
- Completing prescriptions for prescribing reimbursed and partially reimbursed medicines (Forms no. 3 and 3C);
- Completion of references-extract, form 027 / e for hospitalization; Preparation of certificates of accompanying stationary, advisory sections, at CMC, CDDCM;
- Preparation of medical documentation necessary for the organization of the child in preschool and school institutions;
- Preparation of lists of patients scheduled at the family doctor;
- Interpretation of the results of clinical tests of blood, urine, pleural, abdominal and cerebrospinal fluid, faeces, sputum, gastric and duodenal contents;
- Interpretation of radiograms;
- Interpretation and decipherment of ECG, EEG, FEGDS, USG, EcoCG + Doppler, radioisotope scanograms, spiograms, MRI and CT images, etc.;
- Examination and supervision of pregnant women;

**CD 8.5.1 DISCIPLINE SYLLABUS
FOR UNIVERSITY STUDIES**

Edition:	10
Date:	10.04.2024
Page 6/16	

- Supervision of children according the guidelines and regulations;
- Assessment of the child's physical development;
- Instructing parents to offer recommendations on the care of the newborn and the infant at home: the umbilical cord, the newborn's toilet, bathing, dressing, taking curative and hygienic baths, feeding, etc .;
- Interpretation of tuberculin test result (R-a Mantoux);
- Drawing up an individual immunization plan;
- Active surveillance 30 min. of undesirable post-vaccine reactions in Office of family doctor;
- Recommendation of iron and vitamin D preparations for prophylactic purposes;
- Complete examination of the patient in the triage room:
 - a) Assessment of risk factors (smoking, alcohol, diet, physical activity, compliance with prophylactic control visas at the family doctor)
 - b) Anthropometry,
 - c) BMI calculation,
 - d) Measurement of AC,
 - e) Measurement of vital parameters,
 - f) Determination of visual acuity and ocular tonometry,
 - g) Performing and interpreting the ECG,
 - h) Performing the express test and interpreting the results of glucometry/cholesterolometry,
 - i) Diabetic foot examination,
 - j) Calculation and interpretation of cardiovascular risk SCORE 2 and SCORE OP,
 - k) Measuring blood pressure at different age groups,
 - l) Stratification of the risk of diabetes according to the FINDRISC questionnaire,
 - m) Performing and interpreting otoscopy,
 - n) Performing and interpreting ophthalmoscopy,
 - o) Compilation of a work plan in the outbreak of a contagious disease.

VII. OBJECTIVES AND CONTENT UNITS

Objectives	Content units
Theme 1. Family Medicine as a Specialty	
<ul style="list-style-type: none">• To define the content, functions and fields of family medicine activity;• To list the differences between Primary Health care and specialized medical assistance,• To describe the role of Primary Health care in the health system;• To list the skills required for a good practice in Family Medicine	Definition of Family Medicine after the World Health Organization and EURACT. Definition of Primary Medical Assistance. Family Medicine content as a speciality. The role of Family Medicine in modern health systems. Functions and fields of activity in Family Medicine. History of development and implementation. Family medicine in the world and in the Republic of Moldova. The normative acts that regulated the process of organizing Primary Health care according to the principle of family doctor. Family medicine education: history, forms, curricular system, clinical bases. Competencies needed for the good

	practice in Family Medicine. The EURACT Education Agenda.
Theme 2. Management of primary medical practice. Organization of the primary health care team work in the office and at home. The family physician's activity under the compulsory health insurance.	
<ul style="list-style-type: none">• To define the notion of management of primary medical practice;• To describe the models of organizing primary health practice in different countries;• To specify the particularities of organizing the practice of family medicine in the Republic of Moldova;• To list the acts that regulate the activity of the primary care team;• To describe the process of organizing the work of the primary health care team in the office;• To distinguish the principles of compulsory health insurance in medicine;• To know the package of medical services provided at the level of Primary Health care under medical health insurance.	The necessary skills for training the family doctor. The notion of management of primary medical practice. Objectives of management of primary medical practice. The models of organizing primary health practice in different countries. The organization of family medicine in the Republic of Moldova. Documentation governing the work of the family doctor team. Educational objectives in primary health care management. Principles of organizing the work of the primary health care team in the office and at home. Family physician's activity under the compulsory medical health insurance: types of services. Medical documentation and information system. Working with specialists and collaborating at different levels of healthcare.
Theme 3. The healthy person in the practice of the family doctor.	
<ul style="list-style-type: none">• To define the state of health and the importance of the correct diagnosis of the state of health• To describe the contemporary concept and the factors that determine health• To demonstrate the interdependence of health determinants and their effects• To know the individual peculiarities that can influence the appearance and evolution of some diseases• To list the causes and stages of the transition from health to disease	Definition of health. Factors that determine health. The health area. The share of different elements in conditioning health. The Contemporary concept of health determinants. The interdependence of health determinants. Dialectical relations between health and disease. Causes of evolution from health to disease. Effects of risk factors. Stages of evolution from health to disease. The role of the family doctor and the importance of the correct diagnosis of health condition. The role of the family doctor in strengthening the underserved population's health.
Theme 3.1 Health promotion and disease prevention.	

**CD 8.5.1 DISCIPLINE SYLLABUS
FOR UNIVERSITY STUDIES**

Edition:	10
Date:	10.04.2024
Page 8/16	

Objectives	Content units
<ul style="list-style-type: none"> • To define the role of the family physician in health at different levels; • To define the role of the family physician in health at different levels; • To list the types, purposes and contents of preventive activities; • To identify the role of the family doctor in organizing and implementing health promotion measures; • To describe the method of behavioral consultation. 	<p>Definition of the "Promoting health" notion. Objectives and principles. Health education as an important element of health promotion activities. Promoting health based on community/institution. Preventive activities in the family doctor's practice. Purposes and content. Methods of identifying health problems in the community. Sources of information, principles and methods of prioritizing community health problems. Identification of risk factors, the formation of high-risk groups and determination of prevention needs. Consultation of behavior change in Primary Care. Integration of health promotion and various types of prophylaxis into the work of the family doctor. Communication techniques interpersonal for immunization.</p>
<p>Theme 4. Patient-centered consulting. Communication - an important tool in the work of the family physician. The doctor-patient relationship. Ethical aspects of medical.</p>	
<ul style="list-style-type: none"> • To differentiate specific elements of family doctor consultation; • To define the purposes, content and process of family medicine consultation; • To know the role of the doctor and patient in the patient-centered consultation; • To know the principles of assertive communication • To know the patient's rights and the ways to respect them in the family doctor's practice • To develop the skills of organizing a consultation; • To use assertive communication with the patient and his / her family to establish an effective relationship between the doctor and the patient; • To demonstrate the verbal and nonverbal communication skills required in the consultation; • To apply the basic principles of medical bioethics. 	<p>Types of medical consultation and skills needed to lead the patient-centered consultation. The content and the patient-centered consultation process. The role of family doctor and patient in patient-centered consultation. Types of medical consulting and skills needed to lead the patient-centred consultation. The Cambridge-Calgary model of medical consultation based on effective communication. Phases of medical consultation: initiating the interview, collecting information, establishing a positive relationship, explaining and planning, closing the consultation. Values of the doctor-patient relationship and bio-psycho-social model. Communication as a tool in collecting medical information, establishing a relationship of partnership and trust between the physician and the patient. The goals of doctor-patient communication. Types of verbal and nonverbal communication. The phases of listening. The main elements of a communication process. of the transmitter's and the receiver's behavior. Assertive communication. Ethical aspects of communicating with the patient. Fundamental principles of medical bioethics: autonomy, beneficence, non-maleficence, and justice. Definitions and generalizations. Barriers to communication. Causes of medical consultation failure. Human rights in health. Applying the principles of non-discrimination and non-stigmatization.</p>
<p>Theme 5. Particularities of the diagnosis in family medicine. Diagnostic synthesis.</p>

VIII. PROFESSIONAL (SPECIFIC (SC)) AND TRANSVERSAL (TC) COMPETENCES AND STUDY FINALITIES

✓ **Professional (specific) (SC) competences**

- **CP1.** Responsible execution of professional tasks with the application of the values and norms of professional ethics, as well as the provisions of the legislation in force;
- **CP2.** Adequate knowledge of the sciences about the structure of the body, physiological functions and behavior of the human body in various physiological and pathological conditions, as well as the relationships between health, physical and social environment;
- **CP3.** Resolving clinical situations by developing a plan for diagnosis, treatment and rehabilitation in various pathological situations and selecting appropriate therapeutic procedures for them, including providing emergency medical care;
- **CP4.** Promoting a healthy lifestyle, applying prevention and self-care measures;
- **CP5.** Interdisciplinary integration of the doctor's activity in a team with efficient use of all resources;
- **CP6.** Carrying out scientific research in the field of health and other branches of science;
- **CP7.** Promoting and ensuring the prestige of the medical profession and raising the professional level;
- **CP8.** Carrying out the pedagogical and methodical-didactic activity within the technical and professional higher education institutions in the field of health.

✓ **Transversal competences (TC)**

- TC1. Autonomy and responsibility in the activity;
- TC2. Effective communication and digital skills;
- TC3. Achieving interaction skills and social responsibility;
- TC4. Personal and professional development.

Professional competences specific to the discipline of Family Medicine

- Description of the role of Primary Health Care in the health system
- Enumeration of the basic skills for a good practice in Family Medicine
- Defining the organization models of primary medical practice
- Explaining the organization of the work of the primary healthcare team in the office
- Defining the principles of Compulsory Medical Insurance
- Enumeration of the types of medical services provided at the level of Primary Medical Assistance under the conditions of medical insurance
- Establishing the health diagnosis
- Identifying the factors that determine health according to the contemporary concept
- Knowing the individual characteristics that can influence the appearance and evolution of some diseases
- Identifying the stages of the transition from health to illness and the family doctor's

CD 8.5.1 DISCIPLINE SYLLABUS FOR UNIVERSITY STUDIES

Edition: 10

Date: 10.04.2024

Page 12/16

actions

- List the types, purposes and content of preventive activities in family medicine
- Specifying the organization and performance of health promotion measures
- Carrying out the behavioral consultation according to the transtheoretical model and trust in health
- Defining the goals, content, process and particularities of consultation in family medicine
- Knowledge of the family doctor's functions within the patient-centered consultation
- Demonstrating the necessary verbal and non-verbal communication skills during the consultation
- Demonstration of diagnostic synthesis skills based on the solution of the clinical case
- Using the ranking criteria of diseases
- Integrating the skills of using data based on prevalence, incidence, distribution by age and sex, anamnestic information, the results of the objective examination, the results of paraclinical investigations in the decision-making process.
- Compilation of paraclinical investigation strategies in ambulatory conditions
- Realizing the steps for therapeutic synthesis in clinical cases based on National and Standardized Clinical Protocols
- Identifying the types of treatment supervision in family medicine
- Knowing the particularities in making therapeutic decisions in family medicine
- Identifying the causes that lead to the practice of defensive medicine
- Defining the concept of a complex approach to the patient with multiple health problems
- Demonstration of patient management skills with complex health problems
- Identifying the factors that intervene in the behavior of chronic patients and the stages that require the collaboration of the family doctor with the relevant specialists
- Knowledge of the concept and postulates of the Bio-Psycho-Social Model
- Application and formulation of patient cases using the bio-psycho-social model
- Identifying the causes of non-compliance and the doctor's actions in the case of less compliant patients
- Knowledge of family types and their functions
- Identifying the particularities of the contemporary family and the impact on health
- Determining the stages of the family cycle and their impact on health
- Knowing the particularities and advantages of family-centered services
- Identifying the role of the family in decision-making and its involvement in the activity of the interdisciplinary team
- Defining the role of the family doctor in overcoming family crisis situations.

✓ **Study finalities**

Upon completion of the course the student will be able:

- To describe the role of Primary Health Care in the health system;
- To define the content, functions and fields of family medicine activity;
- To know the peculiarities of organizing primary health care services;
- To know the principles of compulsory insurance in medicine;
- To define the state of health and the importance of the correct diagnosis of health;

**CD 8.5.1 DISCIPLINE SYLLABUS
FOR UNIVERSITY STUDIES**

Edition: 10

Date: 10.04.2024

Page 13/16

- To describe the contemporary concept and factors that determine health;
- To know the types, purposes and content of the preventive activities of the family doctor;
- To describe the method of behavioral change consultation;
- To define the purposes, content and process of family medicine consultation;
- To demonstrate verbal and nonverbal communication skills required during the consultation;
- To communicate effectively with all healthcare providers;
- To perform synthesis of diagnosis's;
- To demonstrate the skills needed to solve specific and special medical problems;
- To integrate the abilities of data usage based on prevalence, incidence, distribution by age and gender, anamnestic information, objective exam results, paraclinical investigation results in the decision-making process;
- To compose the paraclinical investigation plan in ambulatory conditions;
- To perform therapeutic synthesis in clinical cases based on National and Standardized Clinical Protocols;
- To demonstrate ethical and deontological abilities in the decision-making process.

IX. STUDENT'S SELF-TRAINING

No.	Expected product	Implementation strategies	Assessment criteria	Implementation terms
1.	Working with information sources	Read the lecture or the material in the textbook carefully. Read questions on the subject, which require a reflection on the subject. To know the list of additional information sources on the theme. Select the source of additional information for that theme. The wording of generalizations and conclusions regarding the importance of the theme/subject.	Ability to extract the essentials; interpretative skills; the volume of work	During the module
2.	Preparing and supporting presentations based on a case study	Selection of the clinical case, establishment of the research plan, establishment of the terms of realization Establishing the PowerPoint presentation components - complains, anamnestic, clinical examination, presumptive diagnosis, elaboration of the investigation plan, final diagnosis and the therapeutic strategy.	Demonstration of the case study	During the module

	CD 8.5.1 DISCIPLINE SYLLABUS FOR UNIVERSITY STUDIES	Edition:	10
		Date:	10.04.2024
		Page 14/16	

3	Reports	Selection of the research topic of the report, elaboration of the plan, setting of the terms of realization and bibliographic sources.	Presentation of the report	During the module
4	Group projects making posters	Selection of the poster theme, selected informative material, graphic quality of the product and its design	Poster presentation	During the module
5	Practical portfolios	Selection of the list of the necessary maneuvers to be acquired, the establishment of the plan and the place of their realization, the establishment of the terms of realization	Reviews from colleagues, nurse or family doctor.	During the module

X. METHODOLOGICAL SUGGESTIONS FOR TEACHING-LEARNING-ASSESSMENT

Teaching and learning methods used

- Classical methods combined with interactive teaching elements.
- Synthesis;
- Demonstration;
- Self-learning etc.

Applied (specific to the discipline) teaching strategies / technologies

- Case study
- Role playing- games
- Working in the small groups
- Individual work
- Clinical observation
- Completing medical documentation
- Plenary debate
- Synthesis
- Solving the problem in the group
- Demonstration
- Brainstorming
- Games
- Themes for the group
- Discussions in small groups
- Presentation of audio-visual materials

Methods of assessment (including the method of final mark calculation)

Current:

**CD 8.5.1 DISCIPLINE SYLLABUS
FOR UNIVERSITY STUDIES**

Edition:	10
Date:	10.04.2024
Page 15/16	

Current:

- Thematic controls
- Testing (pre-test, post-test)
- Case study
- Observations
- Practical demonstration
- Checklists
- Feed-back
- General and specific written assessments

Current or formative evaluation (50% of the final mark) - made up of 5 marks. The first 4 grades are obtained based on the evaluation of performances in seminars and practical works in the form of tests and oral answers, grade no. 5 is obtained at the presentation of the project for individual work

Final:

Thus, the final (examination mark) is an average value between the current assessments average (50%), assessment of practical skills (20%) and assessment as a computer test at the end of the course (30%). The test is carried out by computer-assisted testing in SIMU. Practical skills will be evaluated based on the clinical case, based on the following criteria: argumentation and formulation of the presumptive diagnosis, diagnostic and therapeutic strategy, prescribing the prescription.

Applied (specific to the discipline) teaching strategies / technologies

Applied didactic strategies / technologies (discipline specific) Brainstorming, Problem Based Learning, "Case Study"; "Multi-voting"; "Round Table / Interactive Discussions"; "Group Interview"; Solving the problem in the group.

Methods of assessment (including the method of final mark calculation)

Method of mark rounding at different assessment stages

Intermediate marks scale (annual average, marks from the examination stages)	National Assessment System	ECTS Equivalent
1,00-3,00	2	F
3,01-4,99	4	FX
5,00	5	E
5,01-5,50	5,5	
5,51-6,0	6	
6,01-6,50	6,5	D
6,51-7,00	7	
7,01-7,50	7,5	
7,51-8,00	8	C
8,01-8,50	8,5	B
8,51-9,00	9	

	CD 8.5.1 DISCIPLINE SYLLABUS FOR UNIVERSITY STUDIES	Edition:	10
		Date:	10.04.2024
		Page 16/16	

9,01-9,50	9,5	A
9,51-10,0	10	

The average annual mark and the marks of all stages of final examination (computer assisted, test, assessment of the practical skills) - are expressed in numbers according to the mark scale (according to the table), and the final mark obtained is expressed in number with two decimals, which is transferred to student's record-book.

Absence on examination without good reason is recorded as "absent" and is equivalent to 0 (zero). The student has the right to have two re-examinations in the failed exam.
